

Q1: Metric: Number of parameters. Method: TwitterClient.

Q2: there are some inputs that I think it is not necessary to pass them to this method like `maxFollowIdsPerCredentials`, `maxTrackKeywordsPerCredentials`, `processForMillis`. I think they can be specified as constants or passed through another class/method.

Q3: Yes. It keeps it at 10.

Q4: Total: 3.

Q5: Afferent: number of packages that depend on classes that belong to this package.

Efferent: number of packages that the classes that belong to this package rely on.

$$Q6: \frac{53+753}{154+928} * 100 = 74.49$$

$$Q7: \frac{3+65+693}{154+928+948-806} * 100 = 62.17$$

$$Q8: \left(1 - \frac{126}{3526}\right) * 100 = 96.42$$
